Assignment

LaTeX Assignment Template

Assignment 1

2110999 – Introduction to LaTeX

Computer Engineering, Chulalongkorn University

Worralop Srichainont

Student ID: 6xxxxxxx21

Instructor: Instructor Name | Due: August 31, 2026

August 31, 2026

Contents

1 Introduction

This document is Worralop Srichainont's personal LaTeX template for university assignment reports. The source is published in the GitHub repository. It supports a cover page with course and submission details, a running header/footer, a table of contents, a small set of callout boxes, clean figures and tables, and syntax-highlighted code snippets via `minted`. It also fully supports ภาษาไทย (Thai language) using the THSarabunPSK font. You are free to use and modify this template without any restrictions.

Note: file layout

The template is split into three files: `preamble.tex` (packages and styling you rarely touch), `metadata.tex` (the fields you edit for every new assignment: title, course, instructor, student ID, due date), and `template.tex` (the actual content, this file). For lecture summaries, use the sibling `lecture_note/` folder instead, which has its own independent cover and styling.

Before compiling this document, install the Pygments library required by the `minted` package:

```
pip install Pygments

```

For your LaTeX editor, **Overleaf** is the easiest online option. If you prefer to work locally, install LaTeX via **MikTeX** and use an editor such as **Visual Studio Code** (with the LaTeX Workshop extension) or **TeXMaker**.

To compile, select **XeLaTeX** as the compiler, or run:

```
xelatex -shell-escape -interaction=nonstopmode template.tex

```

2 Callout Boxes

A small, muted set of callout boxes is available for flagging important content without cluttering the page.

Definition

A **callout box** is a visually distinct block used to draw attention to a specific piece of content, such as a definition, a worked example, or a warning, separate from the surrounding body text.

Example

\begin{examplebox} renders this box. Pass an optional argument to change the title, e.g. \begin{examplebox}[Example: recursion].

Key Takeaway

Use callout boxes sparingly. Reserve them for content you would circle in a printed handout, not for every paragraph, so they keep their emphasis.

3 Figures and Tables

Figures use `graphicx` with `caption` for numbering and `cleveref` for cross references, and tables use `booktabs` rules instead of a full grid, so both stay clean on the page.

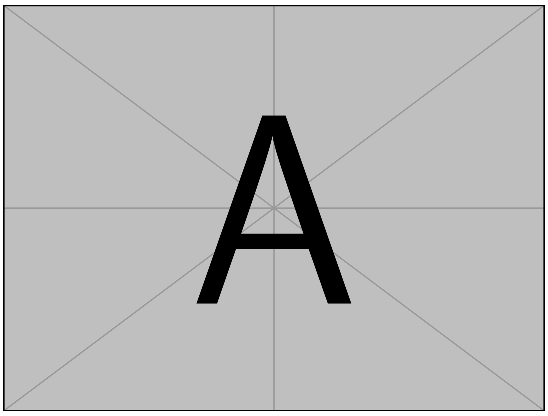

Figure 1: Placeholder figure. Replace `example-image-a` with your own image path.

Figure 1 shows a placeholder figure; Table 1 shows a placeholder table.

Table 1: Sample grading breakdown using `booktabs` rules.

Component	**Weight**	**Score**
Assignments	30%	28/30
Midterm Exam	30%	26/30
Final Exam	40%	37/40

4 Lists

`enumitem` controls list spacing globally, keeping lists airy but still compact enough to scan.

1. First step of a procedure.
2. Second step, with a nested list:
   - Supporting detail one.
   - Supporting detail two.
3. Final step.

5 Mathematics

Numbered displays can be cross-referenced with `cleveref`. For example, Equation (1) gives the quadratic formula.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{1}$$

6 Text Formatting

6.1 Font Styles

LaTeX has various font styles, just like other document editors such as Microsoft Word.

6.1.1 English

6.1.2 ภาษาไทย

6.1.3 Sample Text

In Bangkok, **everywhere you look** is amazing food. To sound like a local, say *bhed nid noi* (*เผ็ดนิดหน่อย*), meaning *a little bit spicy*. Navigate the city using `Google Maps` or the BTS Skytrain (รถไฟฟ้า). Wherever you go, remember: Sawatdee krap (สวัสดีครับ)!

Command	Example
`text`	Normal text
`\textbf{text}`	**Bold text**
`\textit{text}`	*Italic text*
`\emph{text}`	*Emphasized*
`\underline{text}`	Underline
`\textsc{text}`	Small Caps
`\texttt{text}`	`Typewriter family`

Command	Example
`text`	ข้อความ
`\textbf{text}`	**ข้อความ**
`\textit{text}`	*ข้อความ*
`\emph{text}`	*ข้อความ*
`\underline{text}`	ข้อความ

6.2 Font Size

Font sizes are relative to the size declared in `\documentclass`.

Command	Example
`{\small text}`	Small
`text`	Normal size
`{\large text}`	large
`{\Large text}`	Large
`{\LARGE text}`	LARGE
`{\huge text}`	huge

7 Code Snippets

Code blocks use `minted` through a `tcolorbox` wrapper, styled as a GitHub-dark listing.

example.py

```python
def greet(name: str) -> str:
    return f"Sawatdee, {name}!"

```

```
print(greet("world"))

```
